

Hyperbaric Oxygen Therapy Kitchener

Hyperbaric Oxygen Therapy Kitchener - Oxidative therapy is carried out by introducing extra energy into the body. This can be carried out in 3 ways: using Hyperbaric Oxygen and introducing oxygen in the body under pressure, through an infusion of Hydrogen Peroxide or H₂O₂ into a vein for approximately one hour or by combining blood with Ozone gas. It just takes a little amount of Hydrogen Peroxide to produce a large amount of oxygen, hence, areas on the body that suffer from poor circulation can benefit greatly from the supply of oxygen.

Oxidative therapy has been made use of since the 1920's, when Dr. T.H. Oliver first used Intravenous Hydrogen Peroxide during an outbreak of influenza. This successful treatment helped many patients and results were reported in a British medical journal, the lancet. Several years later, Dr. Charles Farr published a paper entitled "Therapeutic Use of Intravenous Hydrogen Peroxide." This particular paper has become the protocol for doctors who administer H₂O₂.

The theories surrounding this particular therapy differ in its explanation of how this particular treatment works. Several scientists and researchers have discovered that the presence of H₂O₂ within the body is much more complicated than originally thought. The benefits of Oxidative Therapy have been show effective for the following health conditions: Cerebrovascular Disease, Cardiovascular Disease, Coronary spasm, Cardiac arrhythmia, Asthma, Peripheral Vascular Disease, Pulmonary Diseases, COPD, Influenza, Raynaud's Phenomenon, Bronchiectasis, Chronic Bronchitis, HIV, Herpes Simplex, Lupus, Immune Disease, Multiple Sclerosis, Alzheimer's, Chronic Fatigue, Fibromyalgia, Rheumatoid Arthritis, Environmental Poisonings, Parkinson's Disease, Migraines, among others.

The energy producing chemical response of oxidation is vital in the body because the body makes use of different forms of oxygen. To prevent damage to surrounding normal tissue, treatments must be controlled carefully. Anti-oxidants that come in the kind of enzymes and vitamins would help to protect the body from whatever damage caused by oxidation. However, the immune system makes use of oxidative energy as a weapon to be able to directly kill infectious agents like for example yeast, bacteria, viruses and parasites.
